did you know that games and puzzles have given birth to many of today's deepest mathematical subjects now with douglas ensley and winston crawley's introduction to discrete mathematics you can explore mathematical writing abstract structures counting discrete probability and graph theory through games puzzles patterns magic tricks and real world problems you will discover how new mathematical topics can be applied to everyday situations learn how to work with proofs and develop your problem solving skills along the way online applications help improve your mathematical reasoning highly intriguing interactive flash based applications illustrate key mathematical concepts and help you develop your ability to reason mathematically solve problems and work with proofs explore more icons in the text direct you to online activities at wiley.com college ensley improve your grade with the student solutions manual a supplementary student solutions manual contains more detailed solutions to selected exercises in the text

elementary linear algebra develops and explains in careful detail the computational techniques and fundamental theoretical results central to a first course in linear algebra this highly acclaimed text focuses on developing the abstract thinking essential for further mathematical study the authors give early intensive attention to the skills necessary to make students comfortable with mathematical proofs the text builds a gradual and smooth transition from computational results to general theory of abstract vector spaces it also provides flexible coverage of practical applications exploring a comprehensive range of topics ancillary list maple algorithmic testing maple ta maplesoft com includes a wide variety of applications technology tips and exercises organized in chart format for easy reference more than 310 numbered examples in the text at least one for each new concept or application exercise sets ordered by increasing difficulty many with multiple parts for a total of more than 2135 questions provides an early introduction to eigenvalues eigenvectors a student solutions manual containing fully worked out solutions and instructors manual available

the transition to upper level math courses is often difficult because of the shift in emphasis from computation in calculus to abstraction and proof in junior senior courses this book provides guidance with the reading and writing of short proofs and incorporates a gradual increase in abstraction as the chapters progress this helps students prepare to meet the challenges of future courses such as abstract algebra and elementary analysis clearly explains principles and guides students through the effective transition to higher level math includes a wide variety of applications technology tips and exercises including new true false exercises in every section provides an early introduction to eigenvalues eigenvectors accompanying instructor s manual and student solutions manual isbn 0 12 058622

math problems applied to real world situations proofs graph theory and discrete probability are all explored in discrete mathematics the text and student manual innovatively address these topics as well as mathematical writing abstract structures and counting concepts are reinforced through games puzzles patterns magic tricks and problems related to everyday circumstances the student solutions manual offers detailed solutions to selected text problems

the primary purpose of this undergraduate text is to teach students to do mathematical proofs it enables readers to recognize the elements that constitute an acceptable proof and it develops their ability to do proofs of routine problems as well as those requiring creative insights the self contained treatment features many exercises problems and selected answers including worked out solutions starting with sets and rules of inference this text covers functions relations operation and the integers additional topics include proofs in analysis cardinality and groups six appendixes offer supplemental material teachers will welcome the return of this long out of print volume appropriate for both one and two semester courses

provides solutions to odd numbered practice problems general problems and cumulative skills problems plus answers to review questions

this text is designed for an in depth course in trigonometry although the development of trigonometry begins on page one the authors realize that many students may have completed algebra and geometry courses some time ago therefore they have included algebra and geometry reminders throughout the text where they know from their teaching experience that many students need help in recalling ideas that are necessary to develop trigonometry while it assumes no previous knowledge of trigonometry this book shows how trigonometry can be used in many fields it also develops algebra skills so that students will be thoroughly prepared to continue their study of mathematics and science the use of graphing calculators has been incorporated throughout the text to reduce the labor of calculations and to expand the students understanding of concepts and give students the opportunity to explore relationships a student solutions manual is available for sale additionally an instructor solutions manual is available for teachers by emailing shirley grall mcgraw hill com

the book covers all the basic proof techniques in a very readable concise way without overwhelming the student the organization is great i like the short chapters highlighting only one concept at a time
