this book links the philosophical perception of time and Einstein's theory of special relativity to economic processes showing that the phenomena of time dilation and length contraction seen in physics can be identified within and adapted to an economic framework the author expands on Marx's model of reproduction with the additional variable of time which is represented as a relative or functional category in addition to allowing a more precise understanding of both static and dynamic relations between economic systems this concept examines approaches to time proposed by Smith, Marshall, and Keynes and challenges the equilibrium and disequilibrium economic models Rohatinski suggests that by understanding the differences in economic activity
